Last updated:	June 2020
Contact:	Urban planning authority, Geodata distribution Tel: +46 31 368 19 60, kartor@stadsbyggnad.goteborg.se
Abstract:	Baskarta is three-dimensional and contains map details with high accuracy, such as height curves, curbs, hedges, fences and trees. The map is photogrammetrically produced from aerial imagery with an altitude of approximately 1,000 meters. In addition, the updating status is presented.
Geographic coverage:	All of Gothenburg
Category:	Buildings and structure, Elevation, Technical supply system
Service type:	Download
Address:	https://opengeodata.goteborg.se/downloads/baskarta/baskarta_dwg_v2.zip
Reference system:	EPSG:3007
Height system:	RH 2000
File format:	SHP
Encoding:	UTF-8
Access:	Open. No authentication.
Licence:	Creative Commons, CC0
Update frequency:	Daily

Description

Layer disposition

Layer name	Attribute	Description
AJOURHALLNINGSTATUS	flygfotoar	Presentation of the base map update status. Aerial photography years refer to years of collecting the images used when mapping the current area. The fact that an area is marked as up-to-date in a specific year means that buildings and roads in public places have been updated that year. Other objects are mapped with varied update frequency depending on the area type and object type.
ANLAG_UNDER_MARK	obkod	Underground facility
BACK	obkod	Brook
BARRTRAD	obkod	Conifer
BASSANG	obkod	Pool
BELYSNINGSSOLPE	obkod	Lighting pole
BROFASTE	obkod	Abutment
